

Marketing Plan Scratch Flow

Competitors first, then demand and supply, then the full strategy deck only when requested.

What changed

- The page now shows market intelligence before a full marketing deck exists, so the user no longer sees only an empty state while the long strategy job is running.
- A new competitor scratch job can be started independently from the full marketing plan.
- A new demand and supply job can be started after competitors are available.
- Both jobs save partial intelligence back to the suite strategy, so the results remain visible even if the full deck later fails or is retried.
- Visible labels were added in Arabic, Hebrew, and English to match the selected audience language already used by the page.

Runtime sequence

- Step 1: User clicks Scratch competitors. Frontend calls POST /suites/{suite_id}/marketing-plan/competitors/generate.
- Step 2: Backend queues a marketing_plan generation job with section=competitors.
- Step 3: Worker sends the competitor research prompt, normalizes the JSON, and saves strategy.marketing_intelligence with phase=competitors.
- Step 4: The page reloads or polls status and renders competitors immediately without requiring marketing_plan_deck.
- Step 5: User clicks Generate demand and supply. Frontend calls POST /suites/{suite_id}/marketing-plan/demand-supply/generate.
- Step 6: Worker sends the demand/supply prompt with existing competitors as context, merges the result, and saves it to strategy.marketing_intelligence.
- Step 7: The user can still generate the full strategic plan later, but that long job is no longer required to see the first research output.

Verification performed

- Backend tests: `pytest -p no:cacheprovider tests/test_generation_jobs.py tests/test_marketing_plan_generator.py -q -> 34 passed.`
- Frontend build: `npm run build in web -> completed successfully with TypeScript checks.`
- PDF generation uses the Codex bundled reportlab runtime and the prompts exported from the production code.

Prompt 1 - competitor scratch

Research and return the competitor scratch pass for this OneShare suite.

Language: Arabic, natural Palestinian/Levantine professional tone when appropriate.
Return STRICT JSON only. No markdown, no comments, no surrounding text.
Return one top-level key: "marketing_intelligence".

Shape:

```
{
  "marketing_intelligence": {
    "phase": "competitors",
    "competitors": [
      {
        "id": "stable id",
        "name": "competitor or research lead name",
        "platform": "google|instagram|facebook|tiktok|website|other",
```

```

    "url": "source or search URL when available",
    "reason": "why this competitor matters",
    "offer": "what they appear to sell or emphasize",
    "evidence": "observable clue or search query used",
    "opportunity": "gap this suite can use",
    "confidence": "high|medium|starter"
  }
},
"source_links": [
  {"label": "source label", "url": "https://...", "source":
"google|instagram|facebook|tiktok|website|other"}
],
"warnings": ["research limitations or validation needed"]
}
}

```

Rules:

- Focus only on finding and explaining competitors or competitor-search leads.
- Return 4 to 10 competitors or high-quality research leads.
- Prefer real names and links from supplied links/profile data when available.
- Use search URLs as starter leads when exact competitor names are not available from the profile.
- Do not create demand_signals, supply notes, opportunities lists, strategy sections, monthly plans, or ad funnels.
- Keep all visible text in the requested language.

Business/profile data:

```

{"suite":{"name":"Client suite"},"brand":{"name":"Client brand","industry":"Local service
business"},"services":["Primary service","Secondary service"],"website":"https://client.example","social_
links":{"instagram":"https://instagram.com/client"},"strategy":{"marketing_message":"Clear value for
the right local audience"},"connections":{"instagram":{"connected":true},"reference_links":{"label":"W
ebsite","url":"https://client.example"},"website":"https://client.example","social_links":{"instagram":
"https://instagram.com/client"},"planning_inputs":{"near_term_focus":"Show competitors first, then
demand and supply"},"upcoming_campaigns":["Summer lead campaign"],"planning_notes":"Keep each
visible before building the full deck."}}

```

Prompt 2 - demand and supply

Build the demand and supply scratch pass for this OneShare suite.

Language: Arabic, natural Palestinian/Levantine professional tone when appropriate.

Return STRICT JSON only. No markdown, no comments, no surrounding text.

Return one top-level key: "marketing_intelligence".

Shape:

```

{
  "marketing_intelligence": {
    "phase": "demand_supply",
    "demand_signals": ["clear market demand signal"],
    "supply_signals": ["clear competitor/supply saturation signal"],
    "opportunities": ["actionable gap or angle"],
    "source_links": [
      {"label": "source label", "url": "https://...", "source":
"google|instagram|facebook|tiktok|website|other"}
    ],
    "warnings": ["research limitations or validation needed"]
  }
}

```

Rules:

- Use the existing competitor scratch pass as context.
- Do not replace the competitor list; only add demand_signals, supply_signals, opportunities, sources, and warnings.
- Return 4 to 8 demand signals, 4 to 8 supply signals, and 4 to 8 opportunities.
- Separate demand from supply: demand is what customers appear to need; supply is what the market already offers.
- Keep all visible text in the requested language.

Existing competitor scratch pass:

```

{"phase":"competitors","competitors":[{"name":"Market
Peer","platform":"instagram","url":"https://example.com/peer","reason":"Similar audience and service
promise.","offer":"Monthly service package.","evidence":"Profile and service page.","opportunity":"Use

```

clearer proof and a simpler next action.", "confidence": "starter"}], "source_links": [{"label": "Market Peer", "url": "https://example.com/peer", "source": "instagram"}]}

Business/profile data:

```
{
  "suite": {
    "name": "Client suite",
    "brand": {
      "name": "Client brand",
      "industry": "Local service business",
      "services": ["Primary service", "Secondary service"],
      "website": "https://client.example",
